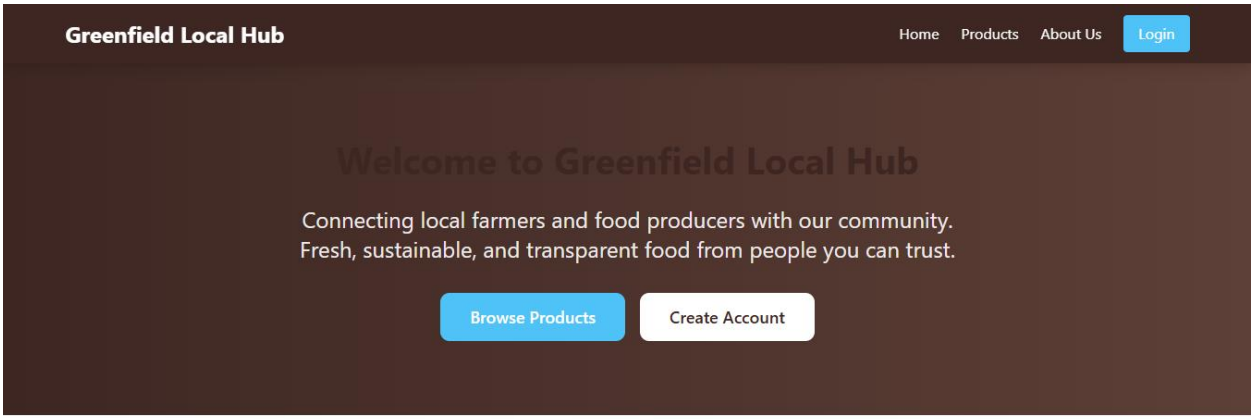
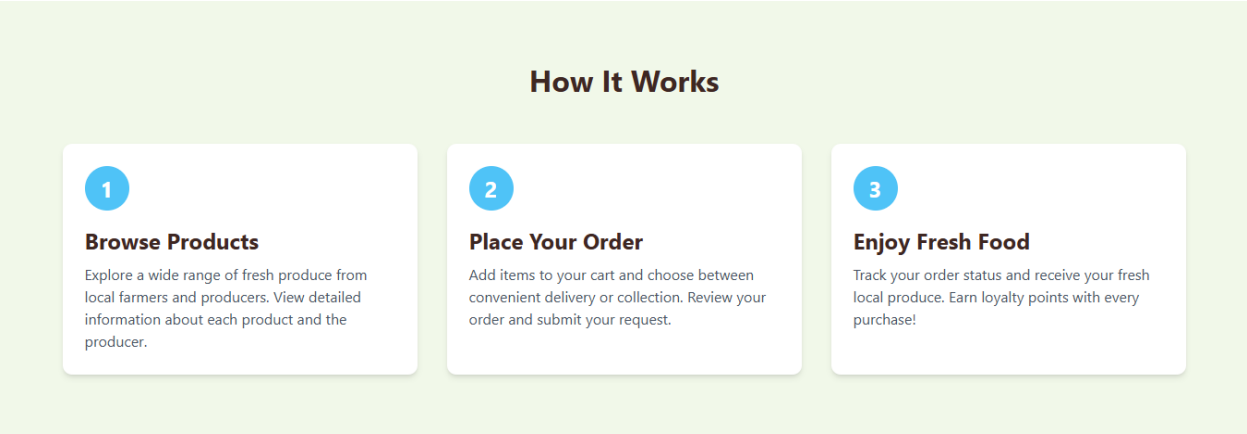
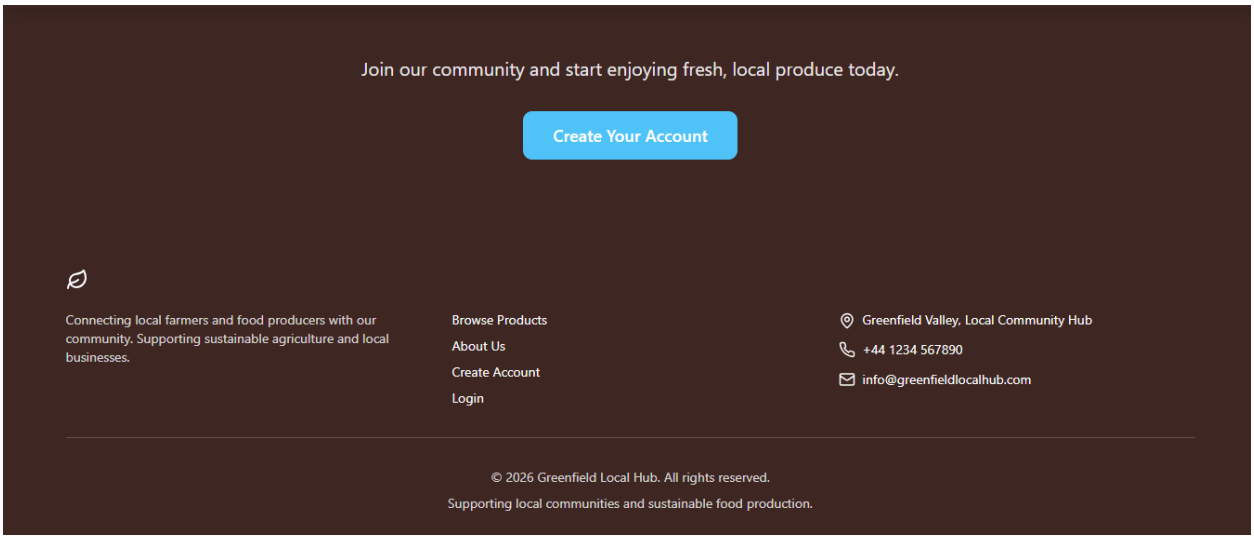
Home Page (Not Logged In):







On the homepage we have gone for a very deep brown theme, This was because as a business that prioritises sustainability and delivering quality local produce, the colour brown is proven to bring about ma minimalistic tone which differentiates the system from that of competitors. Brown also resonates with the local producers as it signifies soil, where most of the products locally grown come from, Unlike supermarkets that are flashy and use bright images to entice the user, WE have gone the complete alternative route so that we attract users who genuinely want local produce whilst also effectively having unique selling points when it comes to the Greenfield System. A welcome message using a Sans-Serif , Didot hybrid font is blended into the background , which naturally allows the users eyes to focus as they realise there is writing within the background of the website. The wording is of size “24px”. In white using a regular Smsung-Sans font we have an overview of the business aim, simple , straight forward and eye catching as compared to the rest of the page , allowing the user to know exactly what the business is within the first few seconds of visiting the site. A bright Blue “Browse Products” button is seen in which the blue represents water which is needed to water the “soil” for the

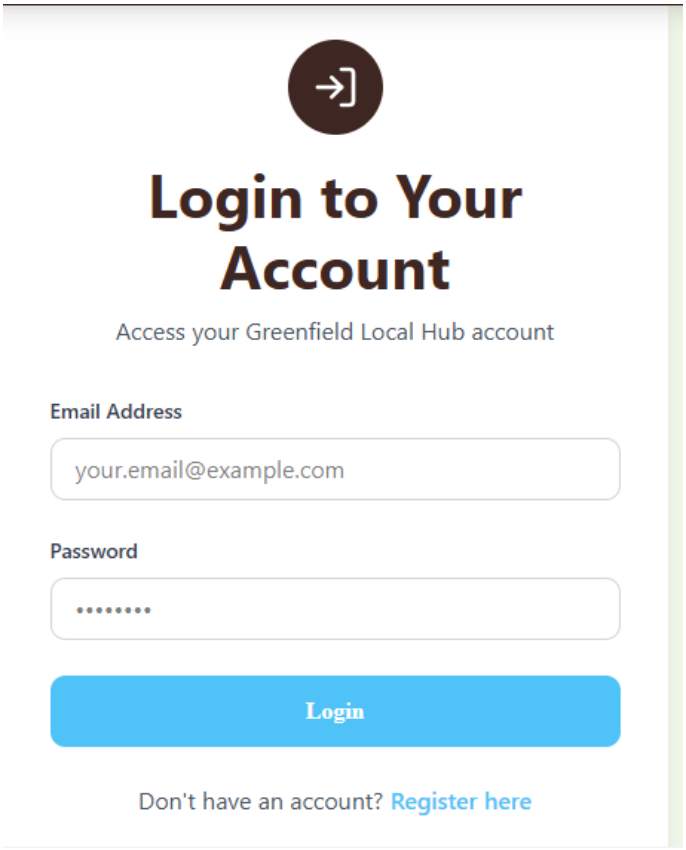
produce like vegetables and fruits to grow, Showing how each colour chosen has meaning behind it. In the same manner, The blue relaxes the user's mind and puts them at ease as blue is known as a calming colour, Studies suggest that it is the world's most popular colour as it consistently also provides stability to the subconcious mind of the user. Having a button like this prompts the user to click it as it brings about curiosity as to why it is different from the rest of the page. "Create Account" is directly next to it using white an brown thus making it stand out but also gives the subconcious mind of the user a sense of beginning or a clean slate with the colour white, making it appropriate to be the create account button. The colour is also quite inviting and prompts the user to be apart of the system. The navigation menu is simply and straightforward to not waste time on the cuwstomers having to understand the user interface, all navigation properties are clearly labelled, with clear outlining of what they are and where they lead to. "Home", "Products" and "About Us" all use the colour white to stand out from the brown background thus prompting the user to click them as they re apart of the navigation tools. It is also quite an industry-standard practice to place the navigation buttons at either the top right or top left of the screen. "Login" is blue to stand out and invite returning customers and producers or users of the system to return with a warm welcome whilst also giving a positive colour-pairing to the "Browse products" button rather than isolating it.

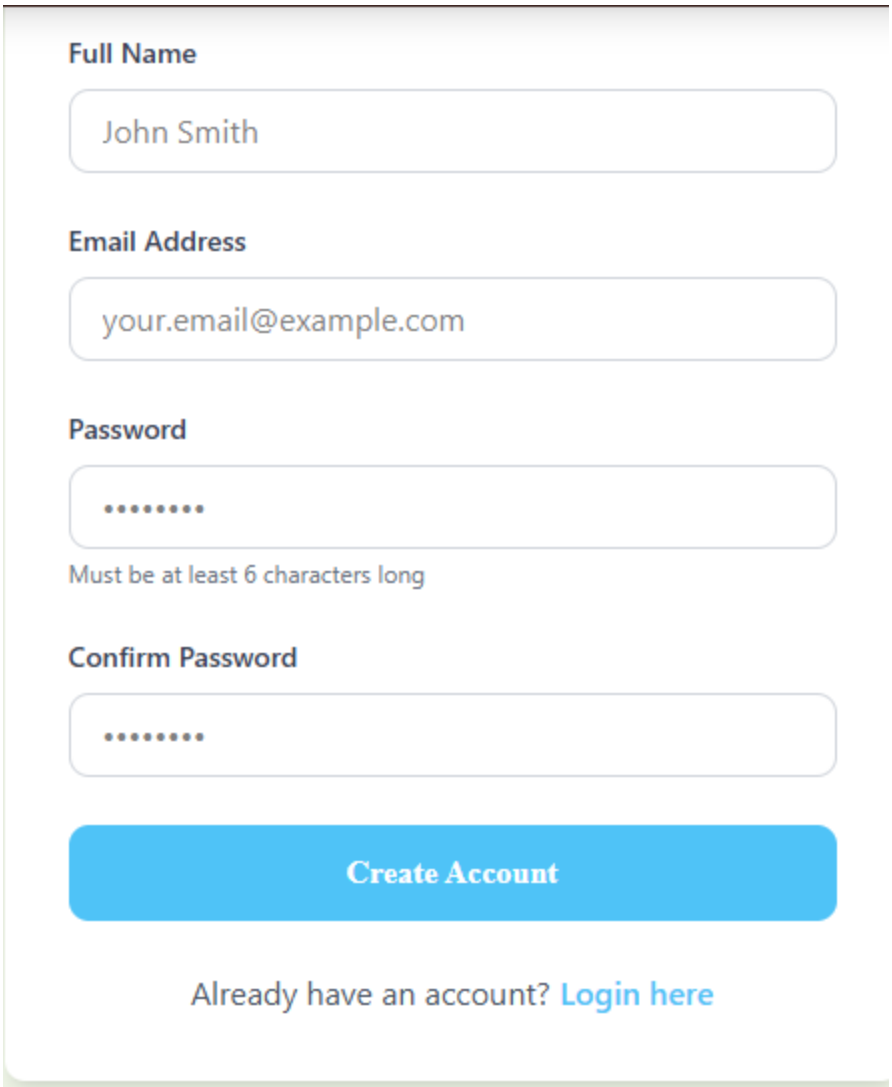
Subsequently, As you scroll down the homepage the background becomes a nice faded green, this was inspired by the goal of sustainability within the business , as the colour green is often associated with recycling and protecting the environment where green itself is the vegetation and the produce that the producers sell. This also gives a visual break for the user as the system is not all just on plain or bland colour. It adds a unique selling point for system whilst keeping the user intrigued before they even browse for products. "How It Works" used Sans-Serif font and is 26px , It is there to draw the user to the system even more whilst the cards give an overview of how the system works and keeps it exciting by combining multiple colours that are used within the site without becoming an eye sore. All 4 main colours of the site are used within this page to keep he user reading and attentive as they do not know what to expect which gives a bit of uniqueness to the system and how it connects to customers. The headings on the page are bold to stand out compared to the text, whilst the text is also using a sans-serif font which is common for many sites like this.

As the user arrives to the very bottom of the page , the main colour of the homepage "brown" returns to close off the page whilst another "Create Account" button is highlighted to remind the user that we would really want them to use and be apart of the system. Infromation and contact details relating to the site are briefly displayed there as well, to be fully transparent with the users from the onset as they do not have to search widely for the such information, it is already on the homepage. The subtle little white leaf once again reinforces the business aim of being a sustainable operation in all it ways and all the local agriculture. A minit navigation

sitemap is also available at the bottom to once again be full transparent with the user about the system. Whilst all text on this page uses a standard Samsung-sans font in 12px which is industry-standard and keeps the system looking professional to customers who have used other systems before.

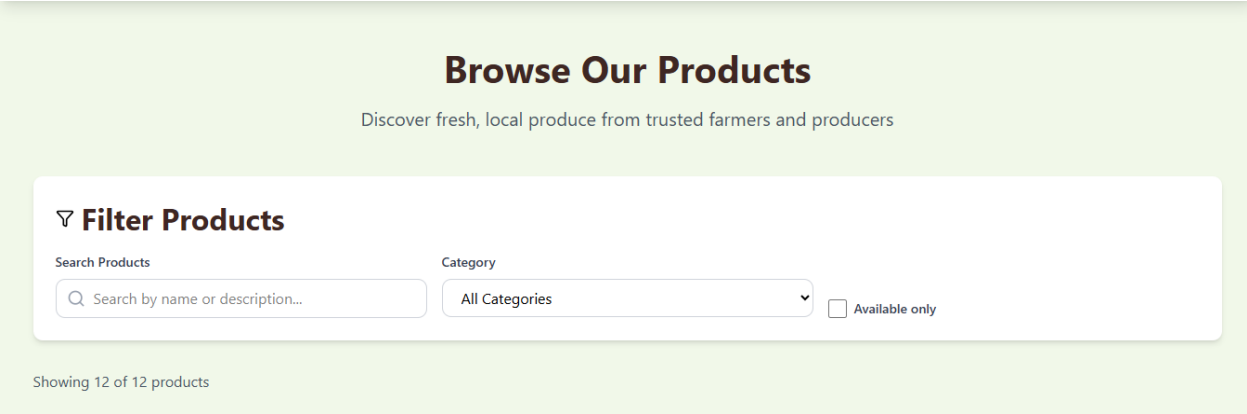
Login / Register:





The login and register pages are simple and effective and meet all the requirements on a standard login and register page within the industry. The create account and login buttons are blue to once again standout and invite the user to be apart of the platform and it also used Helvetica Bold font thus differentiating it from all other buttons within the site thus far, giving it a unique , sleek and modern look. The rest of the fonts on the page are San-serif and standard to maintain the professional look of the platform and to show the users that this is a safe and reliable platform to be apart of. Both pages use a brown and bold heading of 26px with little icons to still intruige the user and show unique aspects of the site but however then uses a plain background and simple and effective language and communication of it , with example entries on each available entry to prove to users that this application is trustworthy and reliable.

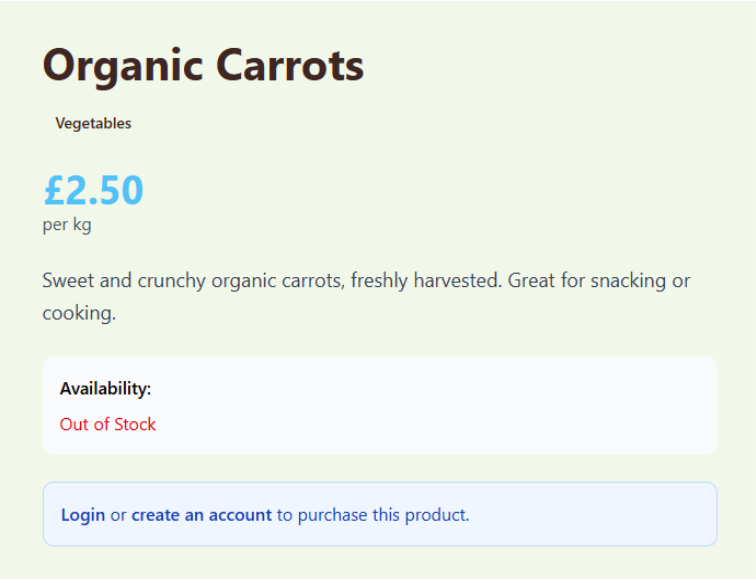
Browse Products (Not Logged In):

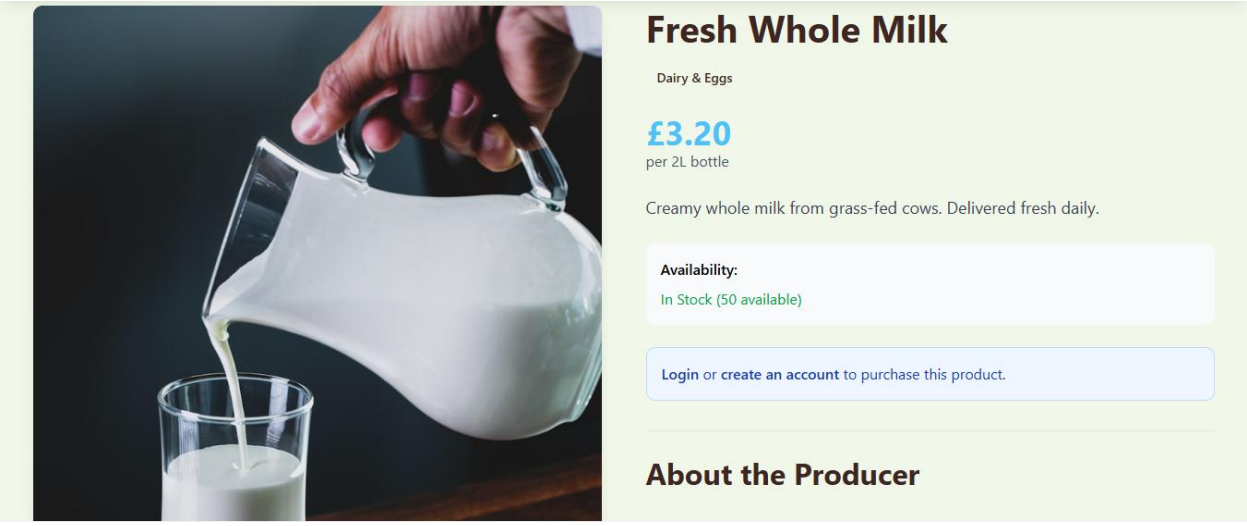


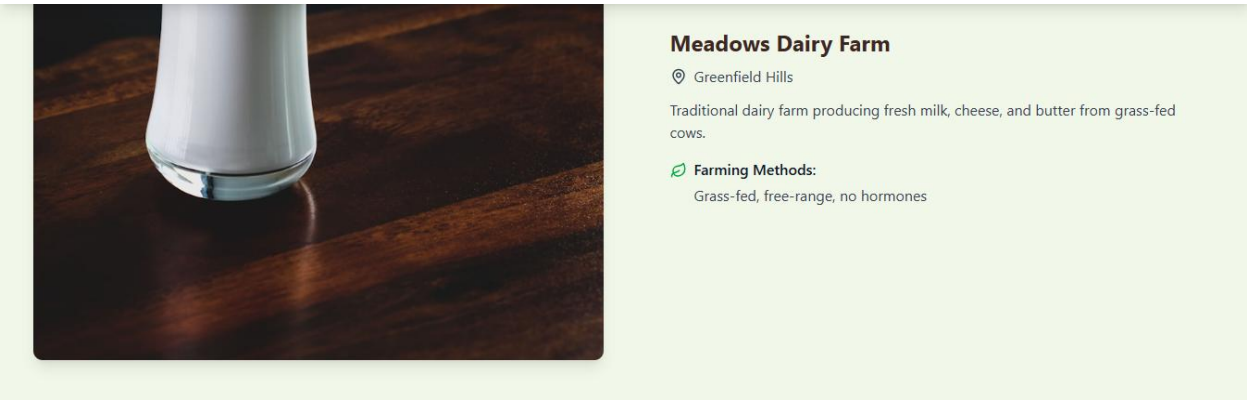
The “Products” page is simple yet extremely efective where there is a green backgroundto align ith the sustanability of the platform as the users are presented to product options with HD pictures and an overview to assist them in making infromed purchasing decisions. The fonts used on this page are Samsung-ans whilst the main headings are using 18px sizing to stand out from the regular text which is using 12px. The descriptions and wording are all in brown which is the first colour the user sess as they enter the platform but the prices are once again blue to standout and provide tyransparency with the users about the pricing of products from the onset, under the price even infromation about quantity eg “per kg” is shwon to further support

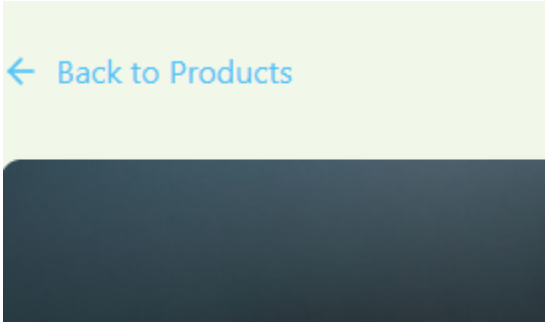
the business aim of being transparent to customers. At the top of the page a filtering option is available for products which will save the customers time from scrolling various products where they can now search for the particular product they want in a specific category ensuring it is avilable thus saving time and lessening possible customer frustration thus increasing possible purchases. “Out of stock” red button appears on top of all products that would have run out thus being clear and direct with customers from the onset thus fostering effective communication and strenghtening the business to customer relationship. The colour red was used as it stands out and often is associated with warnings.

After Click on Product (Not Logged In):



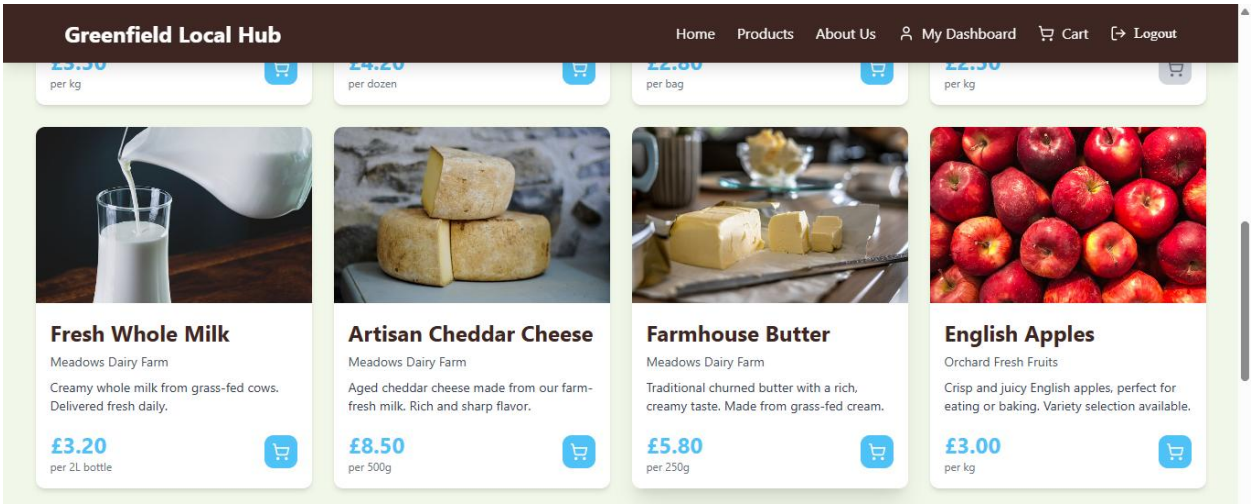


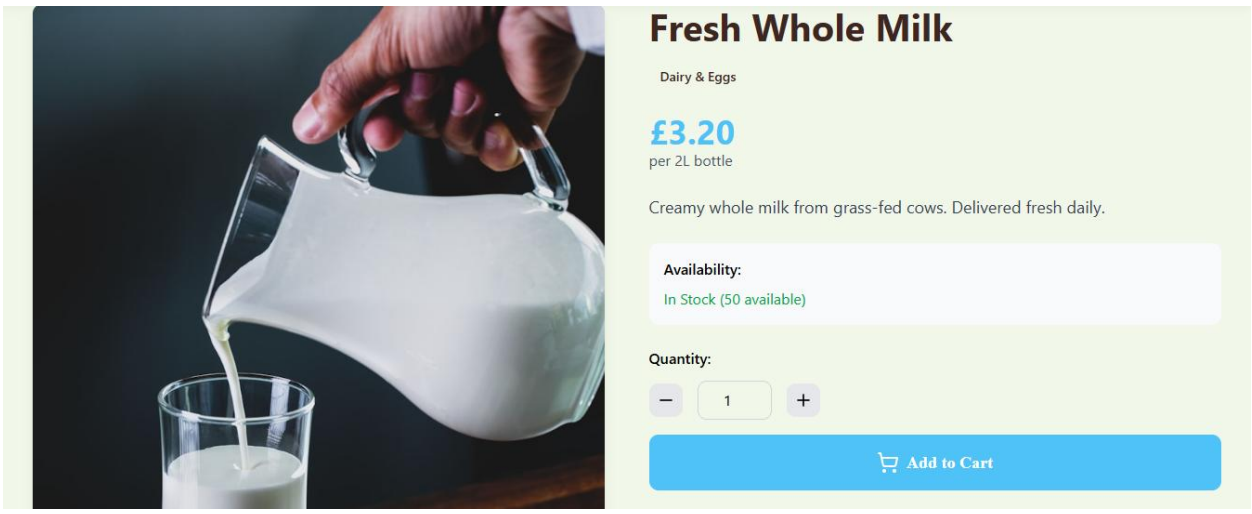




When the user clicks on the item out of stock, the system displays information relating to the item and maintains its green background and blue pricing, however it clearly indicates in red once again how the item is out of stock and unavailable. However, for available products the information is shown to the users in the same and consistent manner with green background and the image of the product to the side and blue pricing, however this time the availability is made clear using a deep green thus almost being a direct opposite of when a product is “out of stock” Within this page there is also a “About the producer2 section which tells the user all they need to know about the producer thus ensuring the user is making informed purchasing decisions with producers who align with the user and their needs fostering clear transparency and an increased customer to business relationship. Farming methods are also shown thus giving the user all the information they would have to search the interne long for at a centralised location. A back to products button in blue is available at the top of the page , prompting for clear and efficient navigation for the user between pages. All text on this page uses Sans-serif font with the headings being bo9ld and 24px whilst the text being the standard font at 12px thus showing how fonts, font size and colour scheme is consistent throughout the system.

Browse Products (Logged in Customer):





Once a customer logs in the dashboard changes and a new “My Dashbaord” , “Cart” and “Logout” button appear on the navigation menu showing how the system changes depending

on the user thus also giving the user a sense of importance as they have new added functionality that was not there before. The background colour green remains consistent whilst once again using HD images of the products to ensure customers make informed purchasing decisions. The colours for the prices remains consistent however a new cart button appears in blue opposite the prices signifying how the user can now purchase things if they wish to providing industry standard added functionality when a user logs into an application. When the user clicks on a specific item they may want to purchase they are introduced to a similar page that of a user not logged in however now “Quantity” options with buttons is now available and “Add to cart” button in blue is now available thus keeping up with modern expectations of such an application. With the buttons , quantity can be chosen and changed whilst when a product is “Out of stock” the red out of stock button remains pasted on the product photo but a new grey cart appears opposite the blue consistent pricing thus showing how it is not in use or Add to cart will not be available for a stock that is not available thus fostering efficient and effective communication both visually and in execution between the business and customers. The application still uses consistent Sans-serif, Samsung-Sans heading of 24px and 18px within these pages whilst text is 12px. Helvetica is seen for ADD TO CART thus making it stand out but also prompts the user to add items to carta and purchase something. The colour scheme of buttons and pages within the system remain consistent thus showing for an organized business with a clear branding direction.

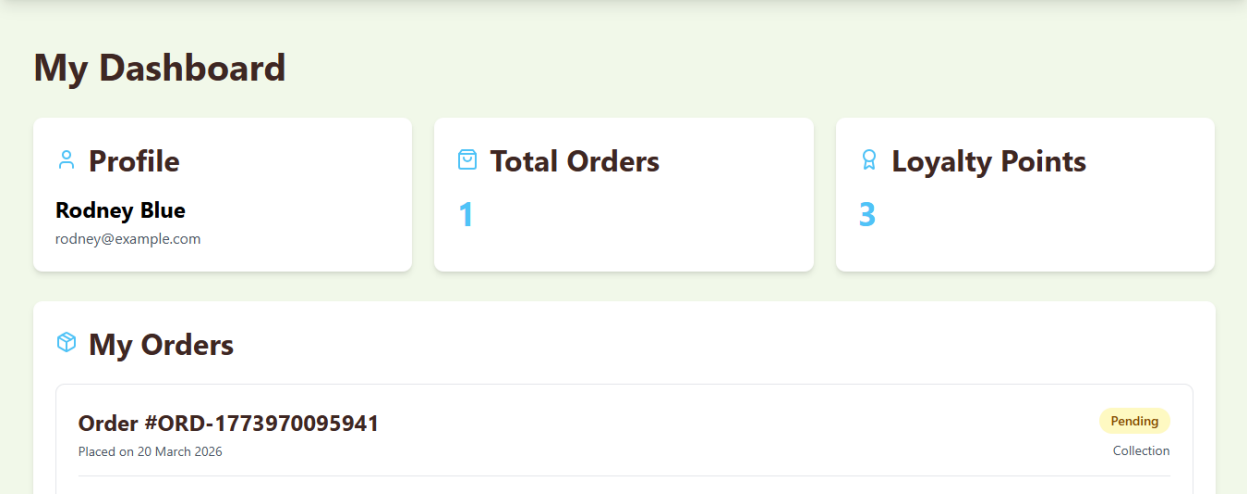
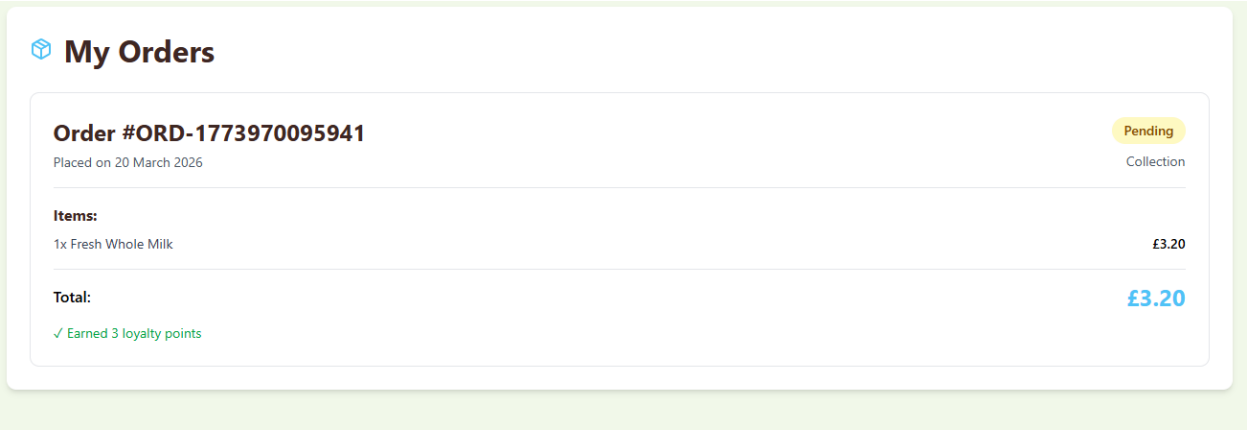
When you click on an empty cart you are taken to a page with a green background and a large Sans-serif font informing the user that their cart is empty, whilst there is text available in 12px below prompting the user to actually add things to cart with a blue “Browse Products” button further prompting the user to actually go and look for products to purchase. When an item is selected for purchase the checkout page arrives prompting the customer to choose a delivery method, after a method is chosen the customer get to see exactly what is in the shopping cart with clear options to remove items, pricing and the item itself and its quantity, if the customer changes their mind they can remove items or clear cart and return. However, if the customer decides to continue they are taken to one last Order items page where the order summary is presented to the user once again with consistent pricing, delivery option and even loyalty points information available ontop of the item and quantity thus fostering the transparency the business aims for whilst ensuring that any purchases made are intentional as you have to go

through quite a long path to get there. The consistency of the page backgroudns and fonts is one to admire where the background remaind green with white cards and fonts and font colours remain blue and brown whilst main headings are bold and 24px Sans-serif and the regular information is 12px thus showing a clear business model.

My Dashboard (Logged In Customer)

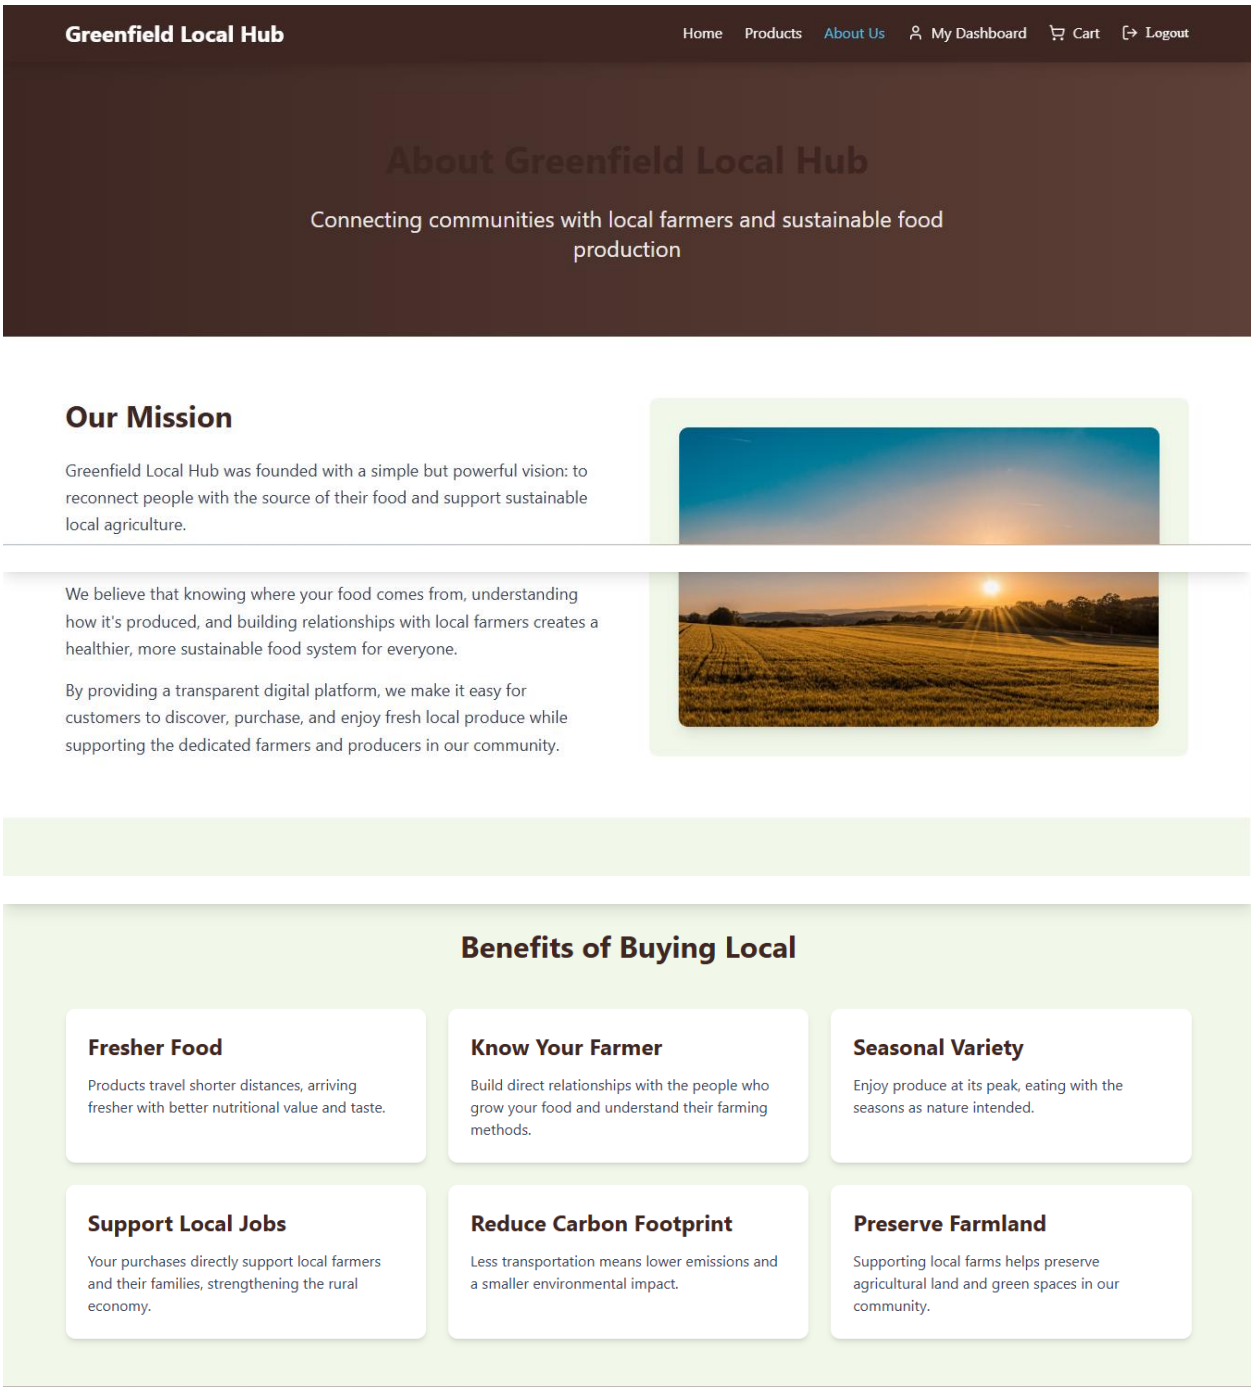




When a customer is logged in their dashboard is visible to them maintain the green background with clear information about the customer profile, their orders, their points accumulates , their current orders and the status of it with the price they paid available as well fostering absolute transparency to the customers whilst also keeping them in the loop as they can track their order and follow whether they are going to get it within their expected time-frame. The heading fonts remain sans-serif at 24px and 18px respectively whislt text is 12px , “Pending” button is there in yellow to show the product is tin transit and when it will arrive the button becomes green. Little hints of blue are used for the icons to keep the platform vibrant and give a modern feel to it whilst still maintaining its unique and effective feature. This dashboard is straight-forward and

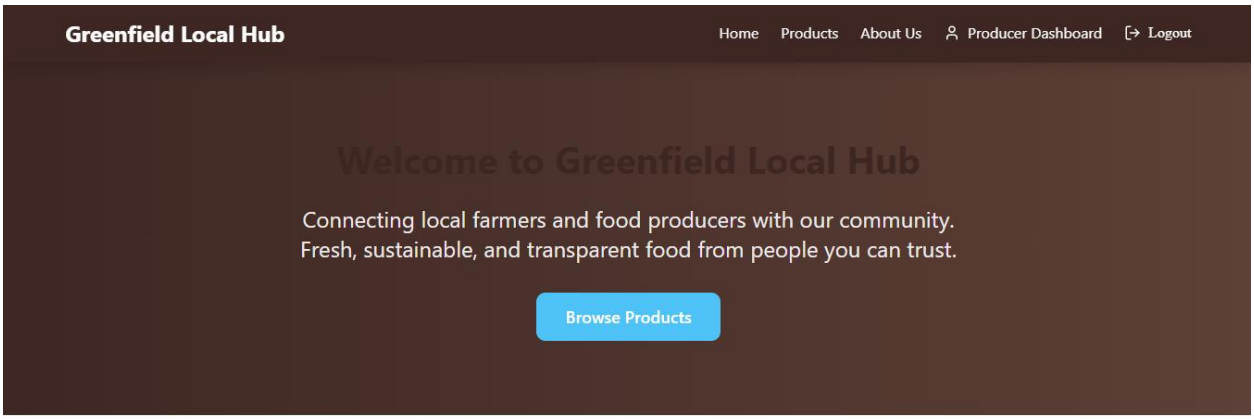
easy to use ensuring it is understood by potential customers of all age ranges without the need for special computer literacy.

About Us Page (Logged In)



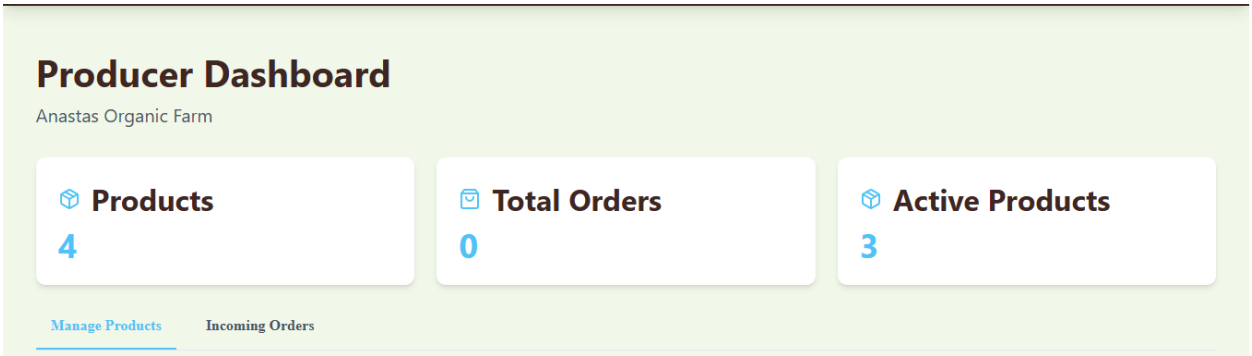
The “About Us” page used 3 of the main 4 colours of the website as brown is at the top giving an overall overview of what is about to take place whilst with the white background and a nice calmly HD image to keep the customer relaxed, the mission of the business is explained thus keeping customers attentive and not bombarding them with just text that they will most likely not red if done so. As the customer scrolls down they see what makes the business different and why it is beneficial to them, to purchase from the producers on the platform thus also giving them an idea on how this platform is also beneficial to them. Simple cards are used on this page with a green background. Sans-serif font is used across this page with the major heading in 24px, subheadings in 16px and the text itself in 12px thus maintaining consistency across the platform whilst delivery information the user in such an efficient and effective manner.

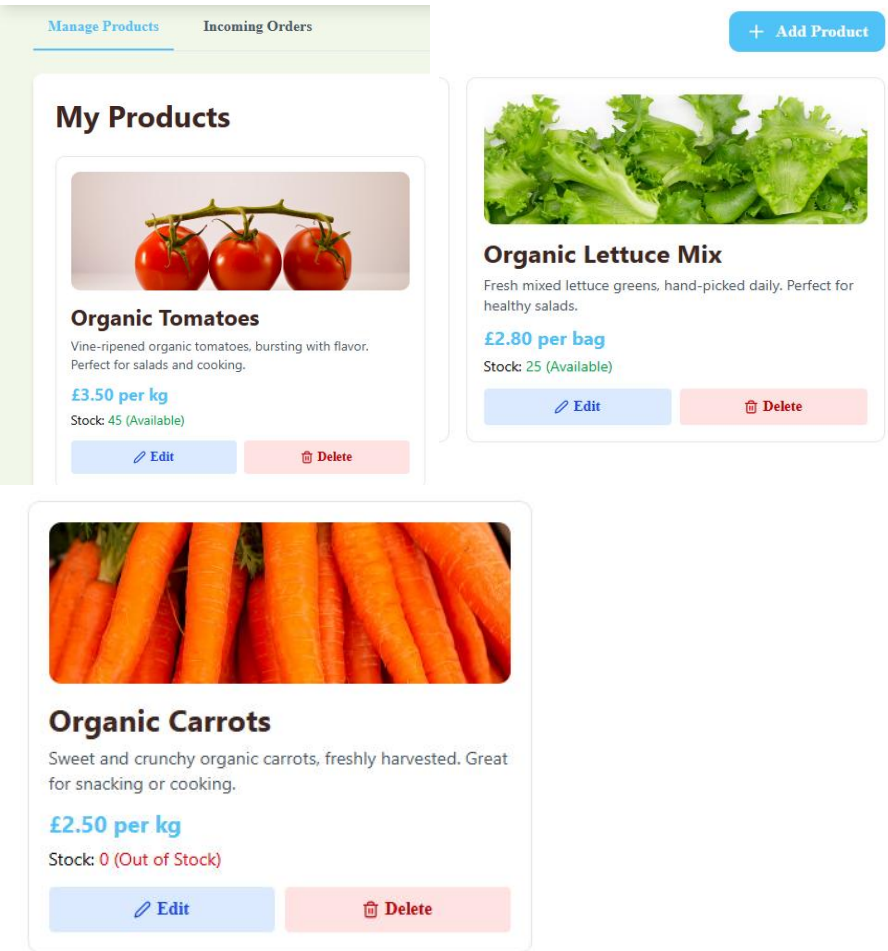
Producer Home Page:



Why Choose Local?

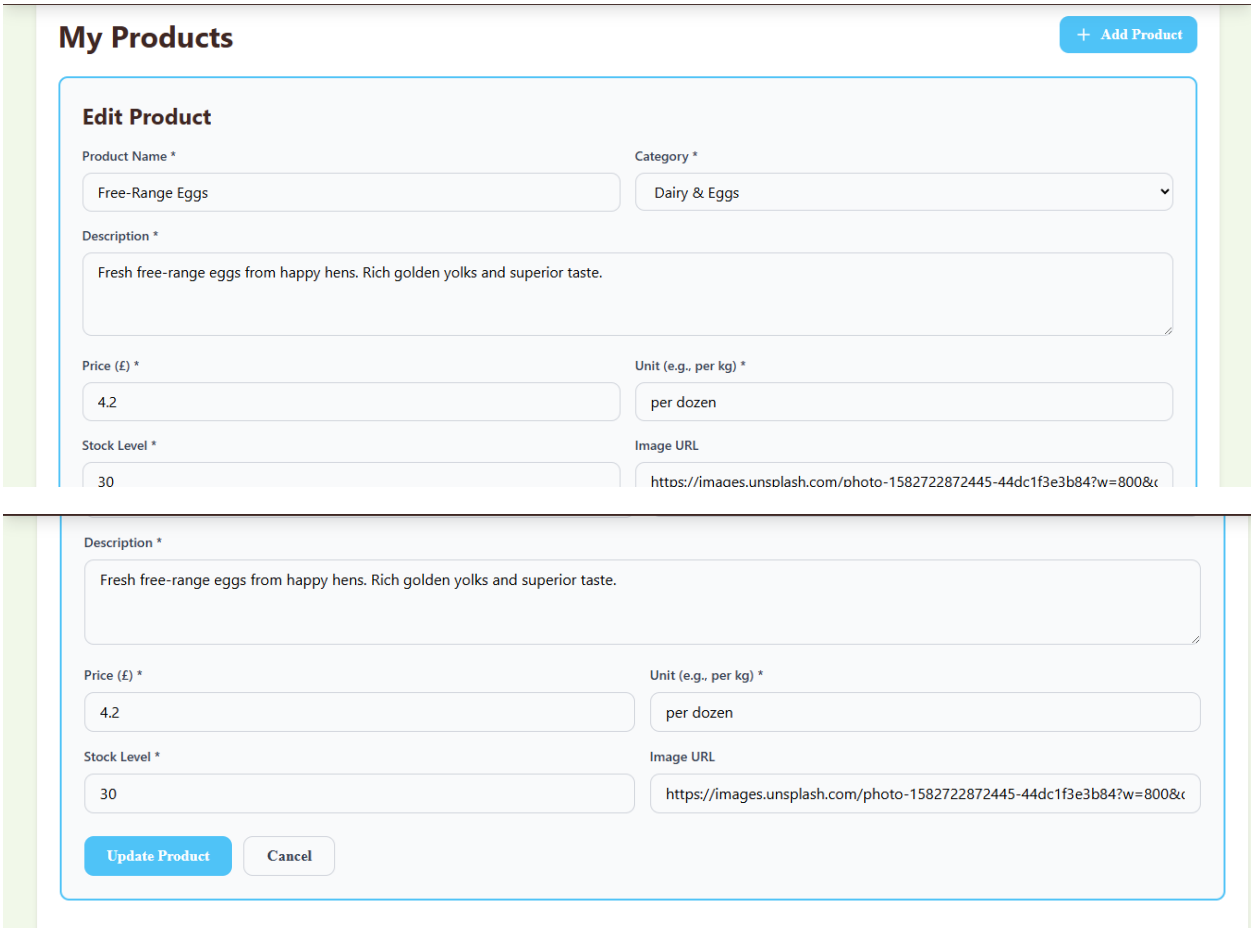
Producer Dashboard (Manage Products):



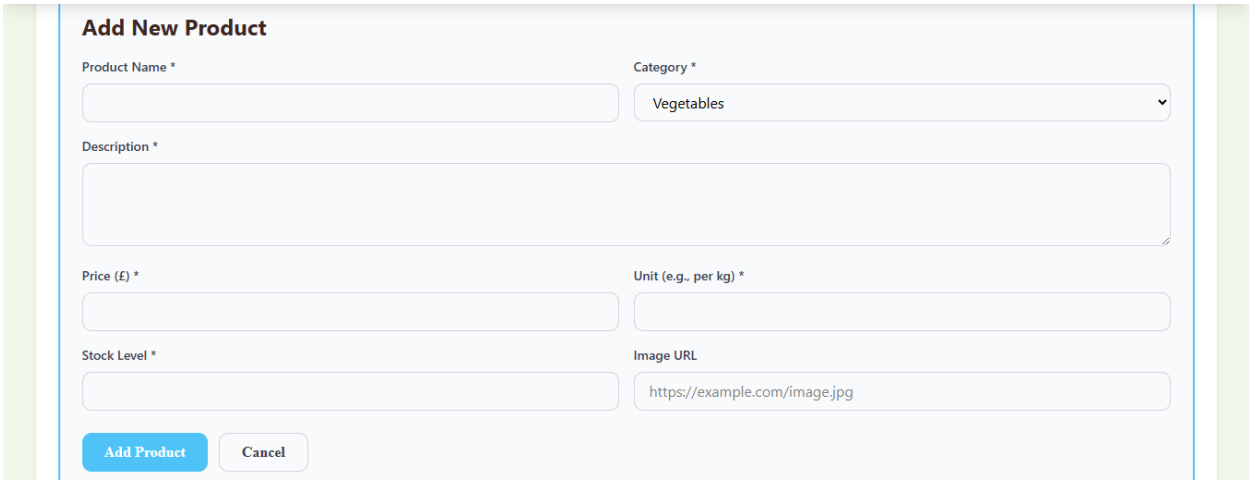


The producer homepage shows how a “Producer Dashboard” is now available for producers and when clicked presents a page with a green background and the specific farm name. The products, total orders and active products are shownto the producer whilst they can also manage current products and incoing orders. Products are shown where the producer caan edit them in a new deep blue or delete them in red, the pricing maintain consistent colours as well as the fonts using Sans-serif at 24px for headoings and 12px for descriptions. Out of stock items show in red whislt in stock show in green The manage products and Incoming orders buttons use Helvetica to stand out whilst keeping the cproducer intrigued and the HD images ensure the producer knows exactly which of their products are they handling.

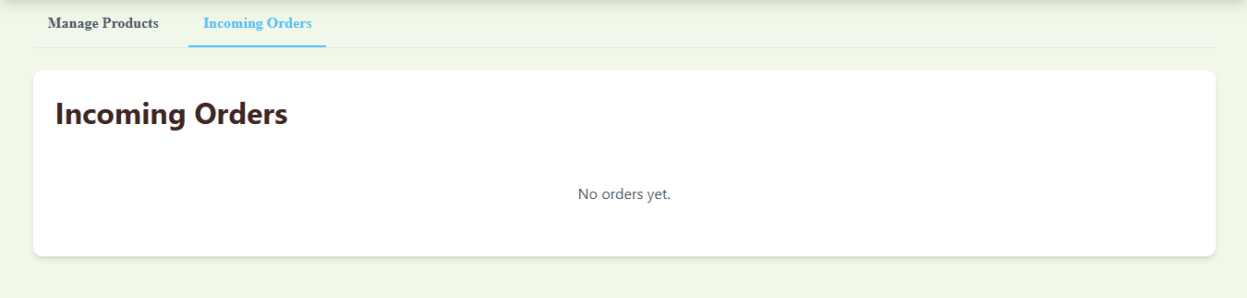
My Products(Edit):



Add New Product:



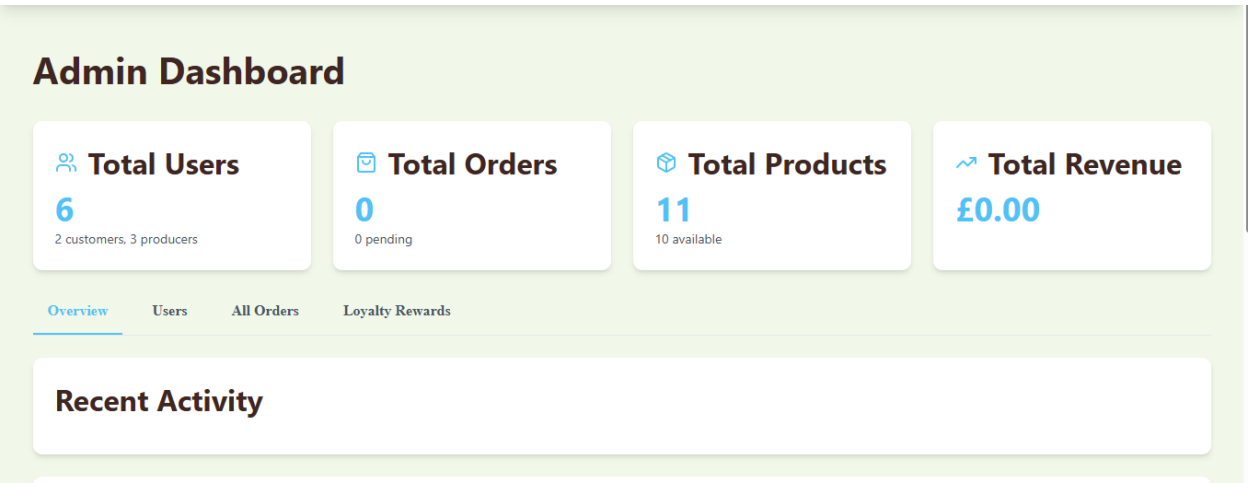
Incoming Orders:

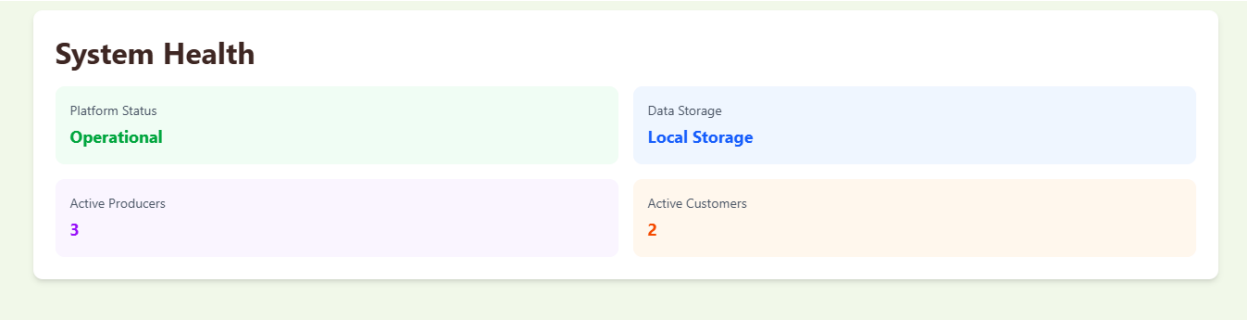


When the producer chooses to edit a product it takes them to a plain screen with a slightly visible green background, However, has a large white card blocking it in which the card allows the producer to edit the products they have up for listing thoroughly from their name , category and price to unit , stock level and even image link and they can update procudts as they wish when they click the blue update product button that used blue to prompt the user to click it. A n add new product button is also available in blue which when clicked takes the user to an add new product page which also has a card and allows the user to add new product to the system rather than editing and when add product is clicked the new product is added. Incoming orders page also shows the orders that the producer would have received and they can mange them there as well. All these pages maintain the consistency of the platform as all headings are using 24px Sans-serif font and normal text is 12px whilst sub-headings are 16px. Manage products and incoming orders use Helvetica font at 12px. colours for buttons remain consistent as Update and Add products are blue to prompt the user to click them.

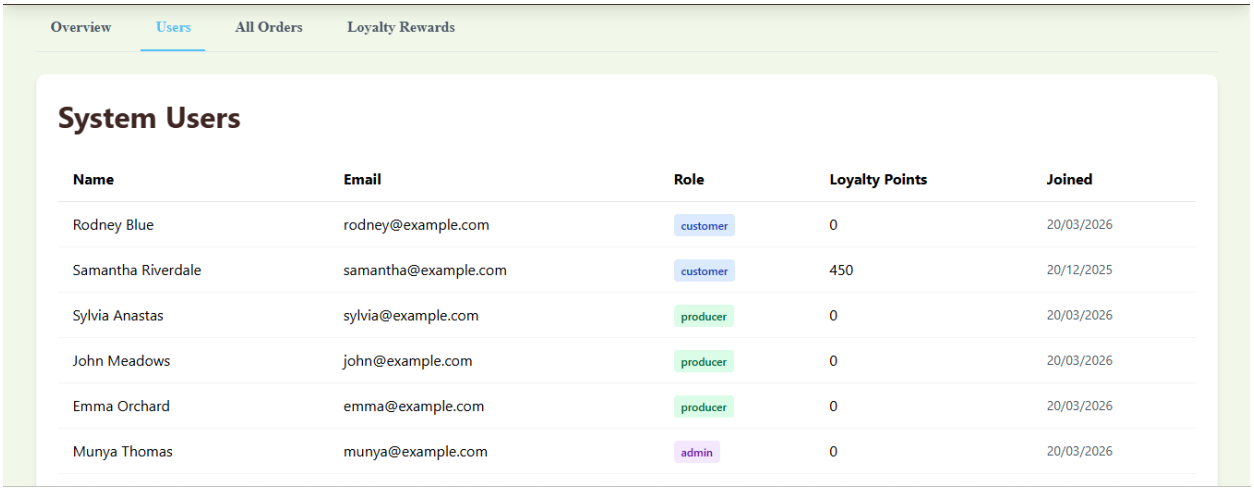
Administrator Navigation:

Admin Dashboard:





Users Option:



Name	Email	Role	Loyalty Points	Joined

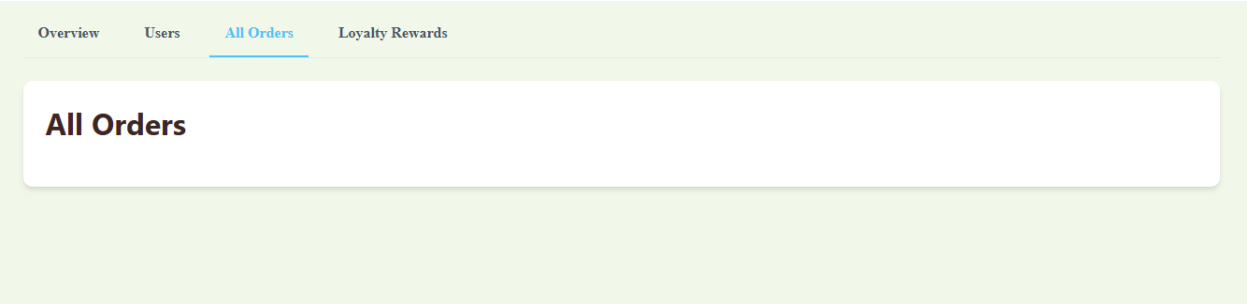
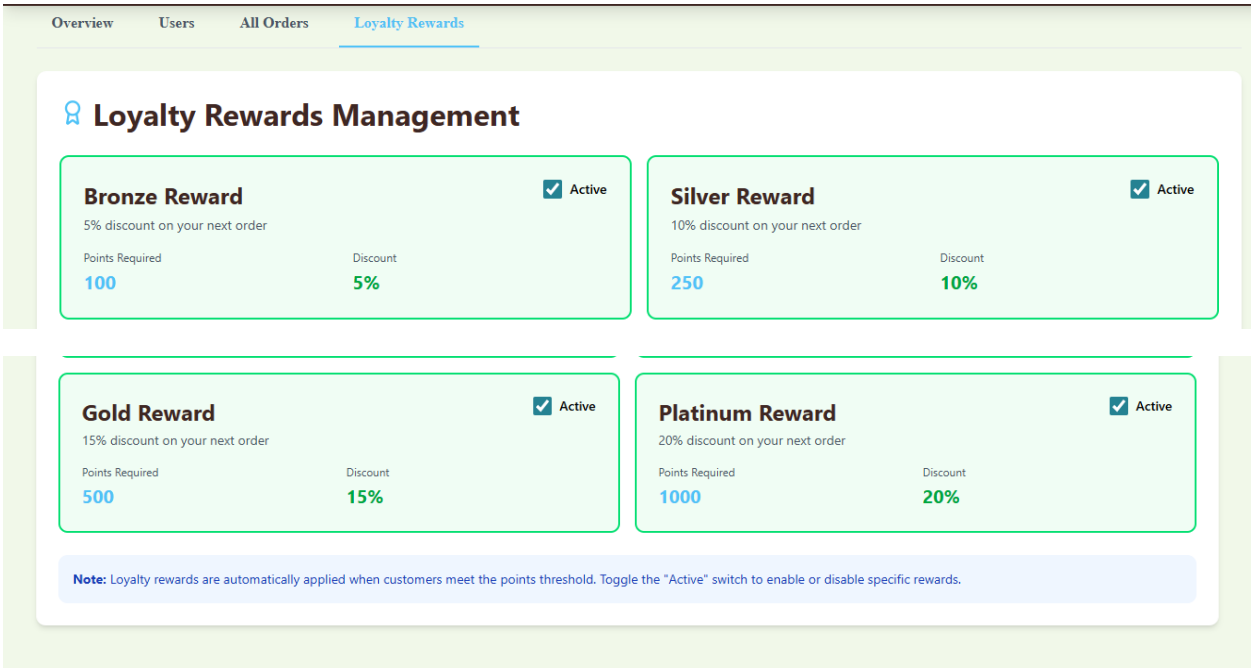
Emma Orchard	emma@example.com	producer	0	20/03/2026
Munya Thomas	munya@example.com	admin	0	20/03/2026

All Orders option:



Loyalty Rewards:



The administrator dashboard is available only to administrators where they can see an overview of the operations of the business from total users to to all orders , products and revenue, they have access to the recent activity of the platform and a system health colour coded card to assist in managing all operations of the business and within them. When navigating the dashboard they can see a list of users including themselves and some information like date joined, loyalty points and what exactly the user is whilst standard information like name and email are available thus ensuring private user information is not available to the administrator just what is necessary. The administrator can see all orders taking place and they have access to the loyalty rewards and can make them inactive or change them depending on the circumstance. Allowing the admin access to this allows an individual who can oversee the operations of the platform ensuring smooth and effective operations. The colour scheme

maintains the green background across the pages whilst we see additional colours like blue, yellow and a lighter purple to give the administrator industry-standard colour coordination tools. These same colours are seen on the different roles of the system users. The discounts on the loyalty rewards maintain a green colour whilst points remain blue thus keeping the administrator engaged. The system maintains consistent headings and font sizes including 24px for headings and 26px for sub headings whilst 12px words. In conclusion, the designs show exactly what the platform is aiming to achieve.
